## ABSTRACT

The objective of this paper is to analyze the herding behavior in the COVID-19 market. The study is based on the daily closing prices of the S&P 500 index and the VIX index. The results show that there is a significant positive relationship between the two variables. This indicates that the market is not efficient and that there is a herding behavior. The study also finds that the herding behavior is more pronounced during the COVID-19 pandemic. This suggests that the market is more volatile and that there is a greater risk of a market crash. The study concludes that investors should be aware of the herding behavior and should not follow the market blindly. Instead, they should conduct their own research and make their own decisions.

## 1. Introduction

At the beginning of 2020, the world was in a state of panic due to the COVID-19 pandemic. The stock markets around the world experienced a sharp decline, and the VIX index, which is a measure of market volatility, rose significantly. This paper examines the herding behavior in the COVID-19 market. Herding behavior is a phenomenon in which investors follow the actions of a large group of people, often without understanding the underlying reasons. This can lead to market bubbles and crashes. The paper finds that there is a significant positive relationship between the S&P 500 index and the VIX index. This indicates that the market is not efficient and that there is a herding behavior. The study also finds that the herding behavior is more pronounced during the COVID-19 pandemic. This suggests that the market is more volatile and that there is a greater risk of a market crash. The study concludes that investors should be aware of the herding behavior and should not follow the market blindly. Instead, they should conduct their own research and make their own decisions.

This study is based on the daily closing prices of the S&P 500 index and the VIX index. The results show that there is a significant positive relationship between the two variables. This indicates that the market is not efficient and that there is a herding behavior. The study also finds that the herding behavior is more pronounced during the COVID-19 pandemic. This suggests that the market is more volatile and that there is a greater risk of a market crash. The study concludes that investors should be aware of the herding behavior and should not follow the market blindly. Instead, they should conduct their own research and make their own decisions.

could show a significant increase in the number of new cases in the first half of 2020. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

### 3.1. The role of the government in the fight against the COVID-19 pandemic

The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

$$\sigma_p^2 = \frac{1}{4 \ln 2} (\ln H_t - \ln L_t)^2 \quad (6)$$

where  $H_t$  and  $L_t$  are respectively the maximum and minimum values of the variable  $X_t$  at time  $t$ .

The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

$$\sigma_{GK}^2 = \left[ \frac{1}{2} \left( \ln \frac{H_t}{L_t} \right)^2 - (2 \ln 2 - 1) \left( \ln \frac{C_t}{O_t} \right)^2 \right] \quad (7)$$

where  $H_t$  and  $L_t$  are respectively the maximum and minimum values of the variable  $X_t$  at time  $t$ .

The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019. The authors also find that the number of new cases in the first half of 2020 is significantly higher than in the second half of 2019.

$$CSAD_{i,t} = \alpha + \gamma_1 D^{vol} |R_{M,t}| + \gamma_2 (1 - D^{vol}) |R_{M,t}| + \gamma_3 D^{vol} R_{M,t}^2 + \gamma_4 (1 - D^{vol}) R_{M,t}^2 + \varepsilon_t \quad (8)$$

where  $D^{vol}$  is a dummy variable equal to 1 if the variable  $X_t$  is in the first half of 2020 and 0 otherwise.

Table

To examine the effects of cross-sectional and longitudinal research designs on the results of the study, the following hypotheses were formulated:

$$CSAD_{i,t} = \alpha + \gamma_1 |R_{Mi,t}| + \gamma_2 R_{Mi,t}^2 + \gamma_3 R_{Mi,t}^2 + \gamma_4 CSAD_{j,t} + \varepsilon_t \quad (9)$$

where  $R_{M,t}$  is the equally weighted average of the first stock market return  $R_{M,t}$  is the equally weighted average return of the first stock market return. We have expanded the number of variables added to the average return and the cross-sectional standard deviation is confirmed to explain a significant portion of the country's

#### 4. Conclusions

This study investigates the gradual integration of the European market for Spain in the context of the global financial crisis, and the impact of the 2008 financial crisis on the Spanish market. The results show that the Spanish market has been integrated with the European market, but the integration is not complete. The results also show that the Spanish market is more integrated with the European market than it was in the past.

Our results show that the Spanish market has been integrated with the European market, but the integration is not complete. The results also show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past.

Additional findings show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past.

However, we have to be careful when interpreting the results. The results show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past.

Finally, we have to be careful when interpreting the results. The results show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past. The results show that the Spanish market is more integrated with the European market than it was in the past.

#### Funding

This paper is a result of the research project "The Impact of the 2008 Financial Crisis on the Spanish Market" funded by the Spanish Ministry of Economy and Finance (Ministerio de Economía y Hacienda) through the project "The Impact of the 2008 Financial Crisis on the Spanish Market" (S11\_2008B\_E) and the project "The Impact of the 2008 Financial Crisis on the Spanish Market" (S11\_2008B\_E).

The authors would like to thank the anonymous referees for their valuable comments and suggestions. The authors would also like to thank the editor for his/her valuable comments and suggestions.

#### Conflict of interest statement

The authors declare that they have no conflict of interest. The authors declare that they have no conflict of interest. The authors declare that they have no conflict of interest.

#### Declaration of interest

The authors declare that they have no conflict of interest. The authors declare that they have no conflict of interest. The authors declare that they have no conflict of interest.

#### Acknowledgements

We are grateful to the anonymous referees for their valuable comments and suggestions. We are also grateful to the editor for his/her valuable comments and suggestions.
